Legrand Care is a new brand specialized in the innovative development of connected solutions for the social and healthcare sector.

Our solutions:

Legrand Care works by innovating and creating digital products and connected care services which enable:

- **Ageing in place**, empowering and enabling people to live the healthiest and most fulfilling lives in their own home.
- **The creation of safe environments** through technology for users, professionals, carer's and family.
- **Delivery of fully managed technology solutions** to support the efficient provision of enhanced care services.

“Our solutions are designed for all care environments and user profiles”

Independent at home

Grouped living

Care homes and hospitals

Tameside Community Response Service

- Tameside's community response service is the first of its kind, at its heart is the way it integrates technology into all of its practices.
- The service has been designed to work around the client needs to give them the right care, from the right provider, in the right location in an efficient and timely manner.
- The service aim is to empower clients and assist them to live as independently as possible with the assistance of digital technology, healthcare providers and community services within their own home rather than a clinical environment wherever possible

Vision

- The vision of this scheme is to ultimately reduce admission or visits to hospital when it is either not required or not in the best interests of the client.
- This also means hospitals can keep beds free and emergency service call outs are then reduced.
- This allows health and social care services to provide patient care where and when it is required more effectively.
- With the digital transition coming imminently, Tameside felt that it was essential to become an early adopter of the new digital technology that is available.
- And have found that their partner services also share this ethos to allow them to be at the forefront of digital developments making them more prepared for the switch over from analogue in 2025.

Solution

- Solution Tameside Community Response Service brings together Community Response Wardens, a clinical team based in the Digital Health Centre at Tameside and Glossop Hospital and Community Pharmacists.
- They all work together to offer service users the independence to stay within their own homes, with control over their own wellbeing and lifestyle; whilst also giving piece of mind for family and friends.
- The digital technology installed such as the Legrand Care Reach IP Alarm Units are easily and quickly installed which reduces any disruptive impacts upon the service user.
- The package of telecare products can be personalised for each individual users needs adding to the benefits of digital technology services.
- All these individual services coming together prevents hospital admissions and speeds up discharge for patients.

Results

- In 2018, this service prevented 2,822 ambulance call outs
- Prevented 3,230 falls
- It also made 3,369 pill dispenser activations.

Perhaps the greatest success is how all the different services have integrated together to create a cohesive and valuable service for service users, embracing digital technologies that clearly benefits their service users.

Solution

- Innovative use of new digital technologies
- Personalised care to fit individuals needs
- Working cohesively with partner organisations with digital technology at its core.

Benefits

- A service designed to work around a client, giving them the right care, from the right provider in the right location.
- Keeping service users independent in their own homes for as long as possible
