Unlock better care outcomes with Andi.

Freedom, flexibility & future-proofing

Andi
by 2iC-Care

IoT and the care sector.

In the care sector, IoT describes a group of peripherals connected via a hub to an ARC &/or cloud-based platform.

The future of IoT:

✓ **19.72%*** Annual growth rate in the IoT market in 2021 (*www.gsma.com/)

✓ **5.1 Billion*** IoT devices predicted to be available by 2025 (*www.gsma.com/)

Andi is a distributed IoT platform.

Andi
by 2iC-Care

Andi is a distributed IoT platform
which uses a service-oriented architecture (SOA) to provide edge computing capabilities that enhance efficiency and minimise latency in care response.

IoT is more than sharing data.
Sophisticated IoT solutions like Andi have **two way interoperability.** This enables one device to instruct another device.

For example: A pill dispenser could instruct a vibrating pillow or a smart light to turn on and alert the user to the need to take their medication.

Configuration must be considered.

Andi's software provides simple drag and drop processes to change procedures and how data flows.

by 2iC-Care

✓ Solve the **analogue to digital** transition.

✓ An **IoT foundation** for your TEC service.

✓ **Future-proofs** your TEC service.
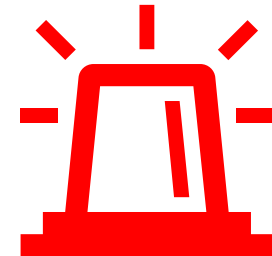

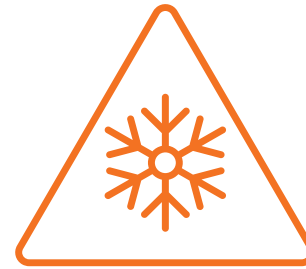

✓ Unlock **device freedom** and **preventative** care.

Enabling early intervention, preventative care and independent living.

Andi by **2iC-Care**

Greater Quality of Life Reduce reactive care costs	→ Greater independence.
Early intervention.	→ Friends, family, carers, community members can attend to needs on time.
Actionable insights for preventative care	→ Multiple data points are combined to turn data into information.
High-quality and service-user specific data	→ Remote monitoring data is sent to the ARC and the cloud.
Device Freedom to connect any device	→ Andi's hub connects to a personalised care package.
Open IoT foundation with *true* interoperability	→ Andi's hub is installed in the home.

Example: Andi's IoT capability enables raw data becomes **actionable information.**

Example: Current pilot for enhanced and advanced Telecare solutions leveraging Andi's IoT platform.

Bringing together Health, Housing and Social Care.
Andi is a flexible, scalable care solution.

One digital solution.

To **solve A4D** service **all** adult social care service-users today and tomorrow.

Andi is the IoT foundation your local authority needs.

Connect to any peripheral.

Gain device freedom to navigate supply chain issues, personalise care packages and use existing peripheral stock.

Andi delivers the flexibility required to bring IoT to health, housing and social care.

Gain clarity.

Andi's dashboard presents all data from all peripherals, and other datasets, providing a **single source of truth** improving efficiency of decision-making driving operational alignment and efficiency gains.

With Andi, commissioners, directors of Adult social care, health and housing colleagues are **aligned.**
